

I recently acquired an XM Satellite Radio system for my truck and have thoroughly enjoyed listening. We who live in west Texas are unable to get stations, current weather or other varied information that we can get with XM. I pay for this service and do not think any group has the right or the obligation to decide what I want to listen to. Particularly the National Association of Broadcasters. I urge you to reject the NAB's petition 04-160 and support XM Satellite Radio for all who choose to have it.
